What is HTML Code Cleaner

FHTML Code Cleaner is intended to optimize HTML documents, resulting in shorter downloading / uploading time. Pages will appear in client's Internet browser in the same way, but they will be about 20%-40% smaller.

Whether you use visual HTML editors or notepad, your HTML code contains unnecessary stuff: unneeded spaces, returns, meta tags, default values in HTML elements, etc. They will make your web pages bigger, without serving any real purpose. Bigger web pages takes longer to load, increases data traffic of your web server, and waste precious bandwidth of its internet connection.

FHTML Code Cleaner's main function is to save space on your web pages by removing unnecessary characters and tags. Though the saving percentage may seem small, load time savings is much higher as your client's Internet browser parses the pages more efficiently.

FHTML Code Cleaner will also help you to check/fix broken links - both page links and image links. You can be released from fussy work on checking broken links.

Main Features

Easy and nice to use interface
Figure 1. Three optimization modes: Maximum, Medium, Minimum optimization.
Two optimization options: Normal mode, Expert mode.
Handy files list mananger window: add files/load a folder, remove/de-duplicate file, save files list as *.cvs file.
F Handy html source editor window: edit html source code/preview web page.
Handy thumbnail Preview window: Test file downloading speed before/after optimization.
Manifold web page formats: html, htm, php, asp and more.
👺 Easy to edit optimization tags.
F Options for creating backup files before optimation.
For the options for delete bachup files after optimization automatically.

© R	ecover the original files from backup files after optimization.
® C	heck broken page links and/or image links.
☞ 0	optimization statistics: file size, optimization ratio, broken links.
©₹ L	oad/save(*.csv) broken links.
®F O	order broken links by scource file names, Broken links, or Times being referred.
© R	uns under Windows 98/ME/NT/2000/XP

System Requirement

®Windows 98/ME/NT/2000/XP

☞32MB Memory

☞10MB Disk Space

How to Install & Uninstall

Finstalling HTML Code Cleaner:

Please follow these steps to install HTML Code Cleaner on your system:
